

Press Release

China Bluetooth Provider Takes on the Giants With its New Hands Free (name omitted)

FOR IMMEDIATE RELEASE

(City) China. ___ May __ 2009: The new (Name omitted) by (name omitted) has just raised design and quality standards for in car hands free, solar powered mobile communication.

The company released details of its new _____ today, saying it also challenges the best Bluetooth providers to match its price as well as its Text-to-Speech, advanced microphone and superior all-round speaker quality. Apart from advances in Text-to-Speech technology, _____ features improved voice dialling and a new text to speech utility that announces the caller's name and number. This the company says enables the on the move user to drive within the law by keeping not only hands but eyes where they are meant to be. And it rules out the need for cumbersome headsets and very small headset buttons.

The device is also extremely user friendly. It was recently recognised as a great solar charging speaker phone when it was named as one of the finalists for the 2009 prestigious CTIA International Tech. award.

Perhaps that is because the solar powered device has also proven to be as handy as it practical. Attach it to a sun visor and after two hours the battery will have sufficient energy for talk time of one hour. It requires no installation and when secured to a sun visor, it connects automatically to a mobile (cell) phone.

The (name omitted), brings a new generation of technology to the in car hands free speaker phone and comes complete with a phone book synchronization function, echo cancellation and noise suppression, auto reconnection, multi-pairing, voice dialling, one-touch answer, call rejection and last number redial.

The device which is being launched simultaneously in the UK and the USA also supports five languages...English, French, German, Italian and Spanish.
